SDGs Targets/Indicators: 14

Abstract:

The problem of plastic pollution has been recognized by many people all over the world. However, with no effective measure existing, it is difficult to solve easily. Many companies nowadays have banned plastic straws due to their harmful effects on the environment, and have switched to paper alternatives instead. But we think that those piecemeal measures won't solve the problem at a fundamental level. The reason is because the plastic floating in the ocean right now at this moment, getting closer to creatures and trying to steal the ocean is a REAL problem. Thus we suggest how to remove plastic from the ocean and utilize it effectively to solve this issue. Therefore, the related SDGs is No.14 noted above.
